## **DETAILED ACTION**

### ***Information Disclosure Statement***

1. The information disclosure statement filed 15 Oct. 2002 has been considered and made of record.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Costello et al. (WO 99/23242).

The reference of Costello et al. discloses a method of using ketoreductases to reduce ketone compounds. See compound No. 7 in Table 1. The method can be performed using the enzyme or whole cell conversion using a microorganism expressing the enzyme.

### ***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 1744

5. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

6. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

7. Claims 3 and 4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Costello et al. (WO 99/23242) in view of Patel et al. (US 5,393,663).

The reference of Costello et al. has been discussed above.

While the reference discloses a sequence of the enzyme employed and the expression of the enzyme in an E. Coli host, the reference is silent as to the use of a *Pichia methanolica* source for the enzyme.

Art Unit: 1744

The reference of Patel et al. discloses that *Pichia methanolica* ATCC 56508 is a known source for a ketoreductase for converting a ketone compound into a S enantiomer compound (See Table 2).

In view of this teaching, it would have been obvious to one of ordinary skill in the art to determine the optimum source of the enzyme from known sources based on considerations such as cost, availability and/or the specifics of the substrate intended to be converted while maintaining the efficiency of the conversion system. If the sequence of ATCC 56508 is not the same as that of Figure 1 of the instant application, those skilled in the art will recognize that numerous silent substitutions of nucleotide base pairs could be introduced into the sequence without altering the identity of the encoded protein product.
